MERLENN BATTLE SHEET

[INSPECTRE]

Question: What Inspectre?

Answer: First let's start with What Inspectre Is Not! Inspectre is **_NOT AI!_** Inspectre is an empirical data tool which assesses or Predicts the Threat Risk of Human Violence! Inspectre is not only a predictive human risk tool but uniquely aligns itself with the Counterspherics-SSS ACP process of handling considerations for Human Violence in or out of the workplace.
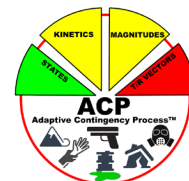

Inspectre uses FBI, Law Enforcement, and Secret Service real-data to predict developing (emerging) human threats to society and or a business.   Inspectre assesses the data the MERLENN® Operator inputs into the system and then provides a Risk Vector for the potential of an individual's risk propensity for violence. Inspectre is not nor was it ever conceived to be and end all set in stone tool, rather a tool to confirm, call attention to, or monitor a person's behaviors enough for the MERLENN® Operator to make informed decisions as to a course of action or inaction. MERLENN®'s Inspectre is a true Decision Support Tool designed to provide another point-of-view based on the actions, activities, influencing factors, of real data and more.

CONSIDERED USE ACTIONS:

- Follow the Counterspherics-SSS ACP Threat Evolution Risk-chain Model for the INSPECTRE Predictive Analysis Decision Support Tool.

- Consider using MERLENN® Continuity's INSPECTRE Predictive Analysis Decision Support Tool to evaluate and generate **daily, weekly, monthly, or quarterly** human activity reports for your area.

- Consider the Counterspherics-SSS ACP Process for Human threats: PowerPoint Presentation
