CLAREMONT, Calif., November 30, 2021 – Counterspherics Inc., a developer of advanced physical safety technologies asks, “Are the pathways to your training vulnerabilities unrecognized, unplanned, unmonitored, incomplete, not exercised, costly, uncompliant; and left to chance?”

MERLENN™ Learn Station provides a blanket of OSHA compliant training coverage for the smallest of occupational hazards to the largest and does so at a self-paced or instructor-led level; keeping your organization compliant. No longer do you have to piecemeal a system together and wonder if it’s right. MERLENN™ Learn Station will help you shore up your training weaknesses, provide automatic certification, support and account for instructor practicum sign-offs and keep track of your training compliance. Beyond a bunch of technical issues with videos that don’t work, are choppy, instruction manuals, interactive tutorials which suck time and help students retain practically nothing, MERLENN™ Learn Station’s PowerPoint-based open book approach simplifies and presents all training one way; the same way. Learn Station is actively involved in making your training life simpler, precise, responsive and impactful.

In service since 2021 with several large institutions at a yearly \$99-\$880 a month depending on student and training module volume automates the heavy lifting for training, monitoring, and administration. Learn Station quickly becomes the time and cost saver you’ve been looking for and keeps state and federal OSHA noncompliance fines out of your life. If you don’t have MERLENN™ you have to ask yourself a question...Why?
